

DOWNLOADABLE LEARNER GUIDE

Applying HRBA in Project Design

Module 3 orientation guide for local and grassroots CSOs

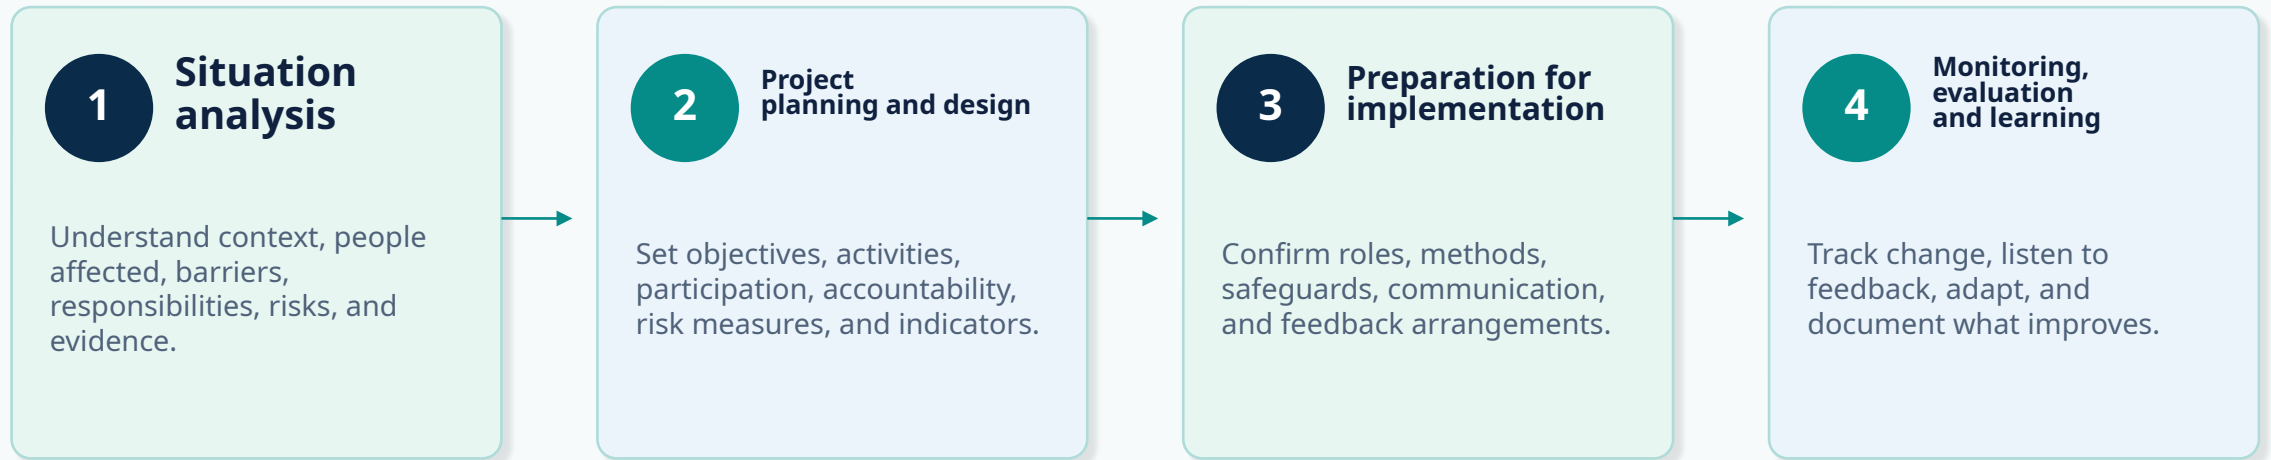

Concept -> Practice -> Output -> Portfolio

Use this short guide before beginning the practical screens. It explains the learning path, the outputs you will create, and how to apply the work safely.

HRBA across the project cycle

HRBA should guide project decisions from the beginning - not be added after the plan is finished.

Across all stages: rights-holders • duty-bearers • participation • equality • accountability • transparency • risk • evidence

Relevance to Ethiopian local and grassroots CSOs

The same HRBA standards are applied in different local conditions, institutions, and service realities.

1

Settings differ

Rural, urban, remote, linguistic, and service-delivery conditions may require different approaches.

2

Institutions matter

Woreda, kebele, service providers, committees, CSOs, and community actors may each have different roles.

3

Barriers differ

Language, literacy, distance, disability, gender, age, livelihood, information, and cost can affect people differently.

4

Engagement must be careful

Constructive participation and accountability should consider context, capacity, and risk.

Contextual adaptation means applying standards and responsibilities practically - it does not remove human rights standards or public responsibility.

Main project-design questions

Use these questions before project activities, budgets, indicators, and implementation arrangements are finalized.

1**Rights and standards**

Which rights, policies, service standards, or commitments apply?

2**Rights-holders**

Who is affected differently?

3**Duty-bearers**

Who has responsibility?

4**Barriers**

What blocks access, participation, benefit, or follow-up?

5**Power and causes**

Who influences decisions, and why does the issue persist?

6**Participation**

Can people influence priorities and decisions?

7**Accountability**

How will feedback receive response and follow-up?

8**Risk and evidence**

What should be checked safely, monitored, or mitigated?

The questions are connected. A finding in one area should influence later design choices.

How practice works in Module 3

You will practise first with Jiru Amba, then apply selected questions safely to your own context.

The module is a guided HRBA project-design workspace: learn, practise, produce, review, save, and download.

Six Module 3 learning areas

Each learning area produces outputs that feed the next stage and the final snapshot.

1 Context and standards

Context Scan
Standards Map

2 Rights-holders and barriers

Rights-Holder
Barrier Map

3 Responsibility, power, causes, capacity

Actor Map
Power Map
Cause & Capacity Map

4 Inclusion, participation, accountability, risk

Inclusion Check
Pathway
Risk Board

5 Project-design repair

Objective
Activities
Logic & indicators

6 Review, portfolio, implementation

Review Note
Final Snapshot
Watch-points

What learners will produce

Module 3 generates practical draft outputs, not only knowledge checks.

Analysis products

- Context and Inequality Scan
- Policy and Standards Map
- Rights-Holder and Barrier Map
- Actor Responsibility Map
- Power Map
- Root-Cause and Capacity-Gap Map

Design-process products

- Gender and Disability Check
- Participation and Accountability Pathway
- Risk and Do-No-Harm Board

Project-design products

- Revised objective
- Revised activity package
- Improved intervention logic
- Indicators and evidence questions
- Draft-plan review note

Cumulative product: HRBA Project Design Improvement Snapshot + implementation watch-points

Safe use, portfolio, and future collaboration

Use the course to practise and produce draft outputs while protecting sensitive information.

Safe to write

- ✓ Fictional examples
- ✓ Generalized barriers
- ✓ Broad project issues
- ✓ Non-identifying design notes

Do not write

- × Names or exact locations
- × Identifiable complaints
- × Survivor stories
- × Sensitive personal details

Generate output

Save to portfolio

Download

Team review

Peer exchange

The final snapshot remains a draft learning product. It should be reviewed through your organization's technical, safeguarding, management, and approval processes.

Curated resources for further reading

Use these resources when you want to go beyond the orientation guide.

- 1 EU HRBA Toolbox** Use for HRBA methodology, principles, programming steps, intervention logic, monitoring, and indicators.
- 2 Ethiopia HRBA Training Manual for Local CSOs** Use for local CSO orientation, programme-cycle application, and context-sensitive practice.
- 3 Updated HRBA Participant Manual** Use for participant-level explanations, exercises, and HRBA principles.
- 4 HRBA Handbook** Use for broader HRBA framing, rights-holder and duty-bearer concepts, and practical guidance.
- 5 Module 3 downloadable tools** Use for context scans, standards maps, barrier maps, power maps, risk boards, and design repair.

You do not need to read every resource before starting. The module introduces the essential ideas and links them to practical tools.
